

Plastic Screws, Bolts, Nuts, Washers, Clips
Threaded Rod, Fasteners, Rivets, Plugs.
... the list is endless and infinite with
Patina's ability to deliver ex-stock, develop
its own tooling or alternatively source the
required products from associates all over
the world. A substantial product range is
kept in stock, ready for overnight delivery,
anywhere in Australia, because we know,
while these plastic parts maybe small,
they are an important ingredient in a
total product or project.

Custom contract injection moulding is
a growing and integral part of the
Patina story. Using the most modern
plastic processing machines, methods
and materials, we can control costs
and improve product performance.

Not only do we offer drafting, tool and
product design, prototyping and all tool
making services, we most importantly,
provide the traditional ideals of quality
and service. We pride ourselves on the
ability to deliver on time with constant
quality that can be relied upon. Price is
not everything but price, quality and
service certainly IS.
